

Techniques to Accelerate Search in ASR
· Beam search
 Prune unlikely candidates at the earliest stage.
 Tree-organized pronunciation lexicon
 For data sharing and better pruning strategy.
 How to structure search space for tree lexicon.
– Language Model Look-Ahead: how to apply LM earlier?
• Fast-match
 One-pass search vs. Multi-pass search
 Integrated one-pass search: integrate all available knowledge sources and explore the whole search space once; slow.
 Multi-pass search: use partial knowledge (e.g., simpler models) to reduce search space; explore the reduced search space by more complicated models; fast.
 Dynamical network expansion
Static decoding based on minimized WFST
Alternative outputs:
– N-Best list: how to generate?
 Word-graph: compact representation of more candidates.

How to handle huge search space in large vocabulary

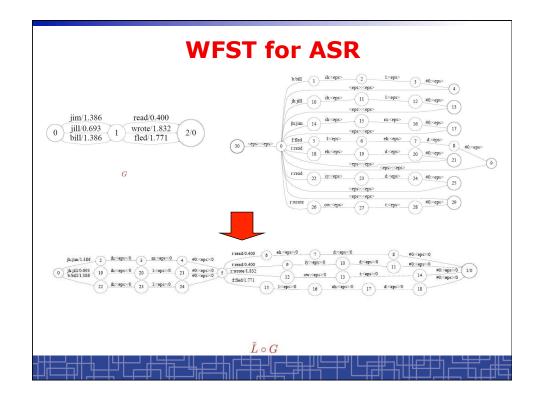

- Fast Match: phoneme look-ahead
 - Look-ahead some feature vectors to determine a small set of most likely phoneme from the current time point.
- Multiple-pass search strategy:
 - 1st pass: use simple language model (unigram, bi-gram) to reduce search space.
 - 2nd pass: use more complicated model (such as tri-gram) to search for the result only in the above reduced space.
- Single-pass search strategy:
 - Dynamic network expansion:
 - No a whole static network is built beforehand (too big).
 - · Expand the net dynamically during the search process.

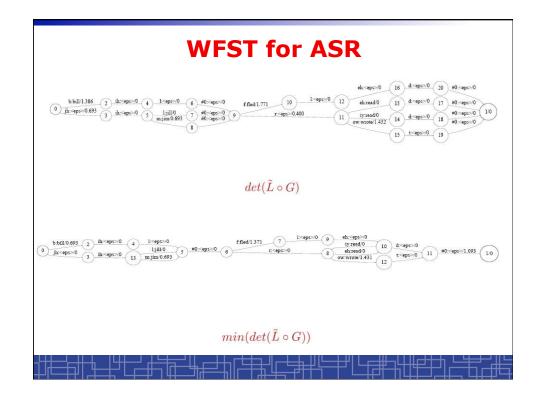

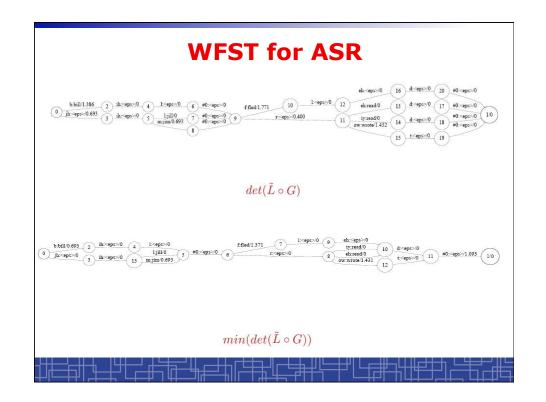

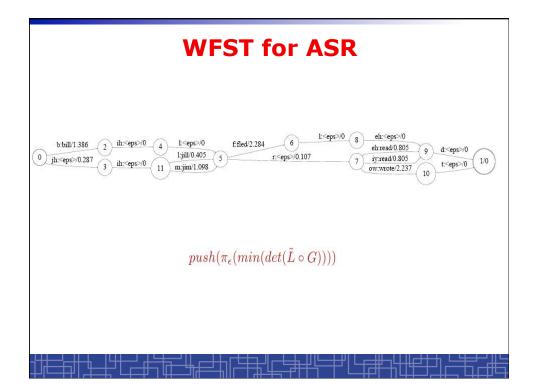

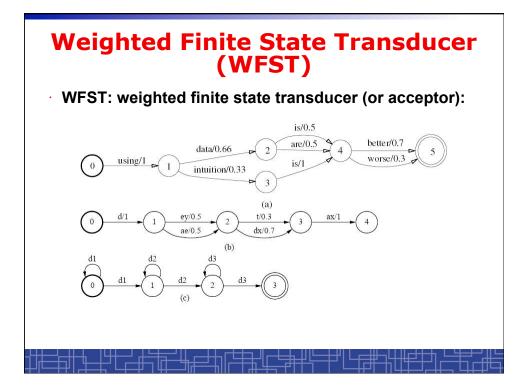

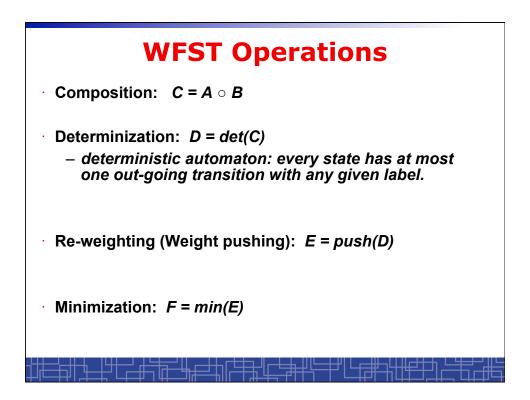

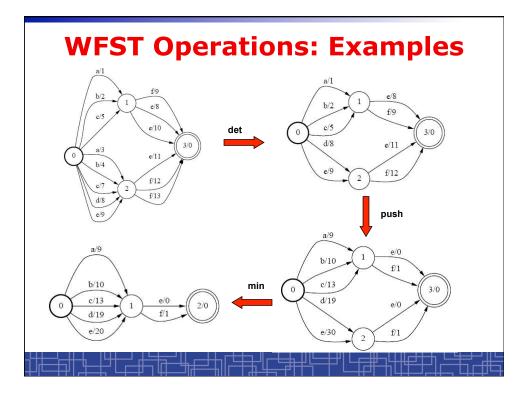

G				
÷	1,339,60			
$L \circ G$	8,606,72		-102	
$det(L \circ G)$	7,082,40	11111 - 1114 - 111 - 114 - 111 - 114 - 111 - 114		\mathbf{X}
$C \circ det(L \circ G))$	7,273,03	and a second second second second	10.02	comparable size
$det(H \circ C \circ L \circ G$				
F	3,188,2			
min(F)	2,616,94	48 5,497,95		
-				
network	X ľ	eal-time		
$C \circ L \circ G$	~	12.5		
$C \circ det(L \circ t)$	- /	1.2		
1 / 77 (7				
$\frac{\det(H \circ C \circ \min(F))}{\min(F)}$	$L \circ G$)	1.0		

Multiple Outputs

How to generate a short list of multiple outputs instead of a single best?

- To apply more knowledge to pick up one.

• N-Best List:

- A list of top N best candidates
- Word graph:
 - A compact representation of a large number of candidates.
- How to generate N-best list or word graph from search process?
 - Standard Viterbi search can find the best one.
 - Modify the Viterbi somewhat for this feature.
