

# Exercise problems (shell and sed)

---

1. Write a shell script that would set current month number at the end of a file  
For example, if the file name is get\_name.txt that should be changed to get\_name\_txt\_3, WHERE 3 IN THE CURRENT MONTH OF THE YEAR.
2. Write a shell script that would do the opposite
3. Write a script that replaces spaces in file name by underscore
4. Print the names of files in Download that hasn't been accessed today (the last 5 minutes)
5. Write a script that would do the job of cat, but only to even numbered lines from a file
6. Write a sed script that displays only the characters between "xxx" and "yyy" (the quotes are not part of the delimiter) in a file
