# KNOCK LOCK

## INTRODUCTION

### Overview

Knock Lock is a device that allows you to make your own secret locking mechanism to keep unwanted guests out of your space.

### Components

1. Arduino
2. Switch
3. 3 LEDs (Red, Yellow, Green)
4. 22 Ohm Resistors (3)
5. 1 Mega Ohm Resistor (1)
6. 10 Kilo Ohm Resistor (1)
7. 100 $\mu$ F Capacitor (1)
8. Servo Motor

### Mechanism

The piezo is used as an input device. When plugged into 5V, the sensor detects vibrations that are read by the Arduino's analog inputs. A high value resistor (1-megohm) is used as a reference to ground for this setup.

Then the piezo is pressed flat against a solid surface that can vibrate, the Arduino can sense how intense a knock is. Using this information we can check to see if a number of knocks fall in an acceptable range. The code tracks the number of knocks to see if they match the settings.

A switch locks the motor in place. The LEDs provide a status: a red LED indicates the box is locked, a green LED indicates the box is unlocked, and a yellow LED indicates that a valid knock has been received.

---

---

# KNOCK LOCK

## HARDWARE

### Building the circuit

The power and ground are connected to both sides of the bread board. One end of the push button is connected to 5V while the other is connected to ground through a 10-kilohm resistor. This junction is then connected to digital pin 2 on the Arduino.

One wire of the piezo is attached to power while the other end is wired to Analog Pin 0 on the Arduino. A 1-megohm resistor is placed between ground and the other wire. A resistor of this magnitude is used because a lower resistor value will result in the piezo being less sensitive to vibrations.

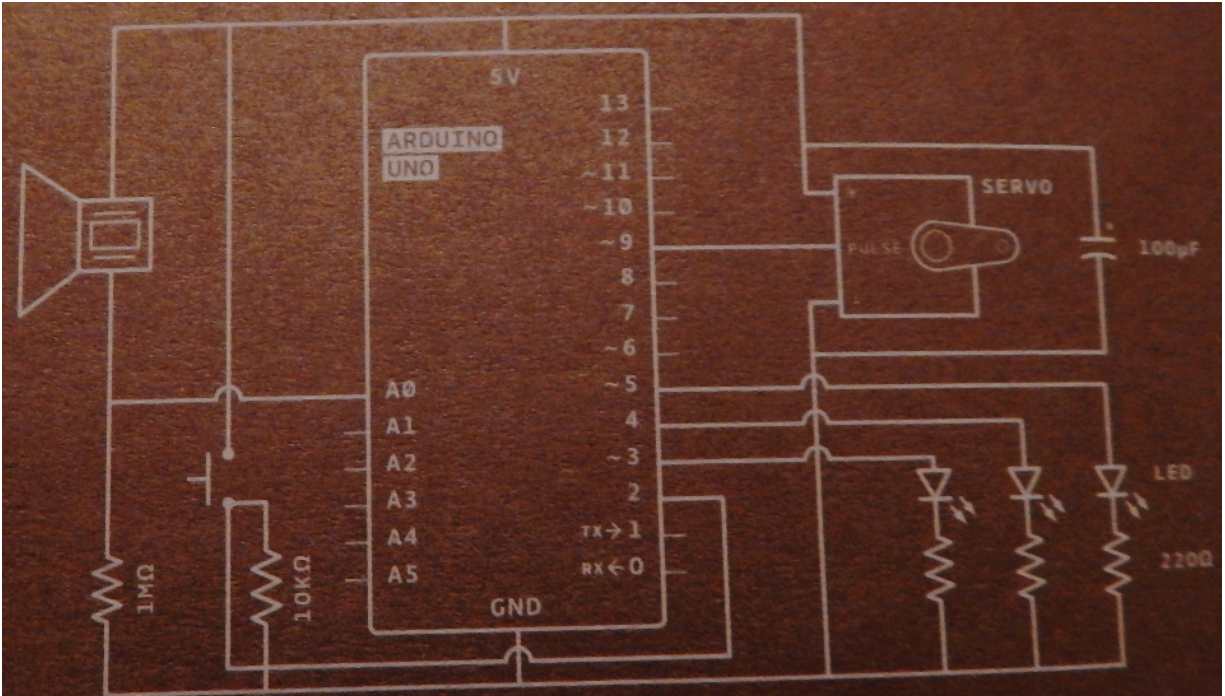

The cathodes of the LEDs are wired to ground and a 220-ohm resistor is connected in series with the anodes. Through the resistors, the yellow LED is connected to the Arduino's digital pin 3, the green LED is connected to the Arduino's digital pin 4 and the red LED is connected to the Arduino's digital pin 5.

---

## KNOCK LOCK

The red wire of the servo motor is connected to power and the black wire is connected to ground. A 100 $\mu$ F electrolytic capacitor is placed across power and ground to smooth out any irregularities in voltage. The servo's data wire is connected to pin 9 on the Arduino.

---

# KNOCK LOCK

## SOFTWARE

### The Code

The Servo library is imported to create an instance to use the motor.

```
#include <Servo.h>

Servo myServo;
```

Constants to name the inputs

```
const int piezo = A0;
const int switchPin = 2;
const int yellowLed = 3;
const int greenLed = 4;
const int redLed = 5;
```

Variables to hold values from switch and piezo

```
int knockVal;
int switchVal;
```

Constants to be used as thresholds for the knock maximum and minimum levels

```
const int quietKnock = 10;
const int loudKnock = 100;
```

The locked variable is used to determine if the lock is engaged or not. A boolean is a data type that can be true (T) or false (0). We begin with the mechanism unlocked. The last global variable will hold the number of valid knocks received.

---

---

# KNOCK LOCK

```
boolean locked = false;
int numberOfKnocks = 0;
```

In `setup()` the servo is attached to pin 9 and the LED pins are set as outputs while pins are set as inputs.

```
void setup() {
  // put your setup code here, to run once:
  myServo.attach(9);
  pinMode(yellowLed, OUTPUT);
  pinMode(redLed, OUTPUT);
  pinMode(greenLed, OUTPUT);
  pinMode(switchPin, INPUT);
  Serial.begin(9600);
}
```

Serial Communication is initialized with the computer to monitor the knock volume, the current state of the lock and how many more knocks are left. The green LED is turned on, the servo is moved to the unlocked position and the current status is printed to the serial monitor indicating the circuit is in the unlocked position.

```
  digitalWrite(greenLed, HIGH);
  myServo.write(0);
  Serial.println("The box is unlocked!");
}
```

In `loop()`, check to see if the box is locked or not. This determines what happens in the rest of the program. If it is locked the switch value is read.

```
void loop() {
  // put your main code here, to run repeatedly:
  if(locked == false) {
    switchVal = digitalRead(switchPin);
  }
}
```

---

---

## KNOCK LOCK

If the switch is closed (it has been pressed), the `locked` variable is changed to `true`, indicating that the lock is engaged. The green LED is turned off and the red LED is turned ON. This gives visual feedback on the status of the lock. The servo is moved into the lock position and a message is printed out to the serial monitor indicating that the box is now locked. A delay is added so the lock has enough time to move into place.

```
if(switchVal == HIGH) {  
    locked = true;  
    digitalWrite(greenLed, LOW);  
    digitalWrite(redLed, HIGH);  
    myServo.write(90);  
    Serial.println("The box is locked!");  
    delay(1000);  
}  
}
```

If the `locked` variable is `true`, and the lock is engaged, the value of the vibration of the piezo is read and stored in `knockVal`.

```
if(locked == true) {  
    knockVal = analogRead(piezo);  
}
```

This statement checks to see if there have been fewer than three valid knocks and there is some vibration on the sensor. If these are both true, check to see if this current knock is valid or not and increment the `numberOfKnocks` variable. This is where the custom function `checkForKnocks()` is called. After checking the function, print out the number of knocks still needed.

```
if(numberOfKnocks < 3 && knockVal > 0) {  
    if(checkForKnock(knockVal) == true) {  
        numberOfKnocks++;  
    }  
    Serial.print(3-numberOfKnocks);  
}
```

---

---

```
    Serial.println(" more knocks to go");  
}
```

Check if there have been three or more valid knocks. If so, the locked variable is changed to false and the servo is moved to the unlocked position. Wait for a few milliseconds to let it start moving, and change the status of the green and red LEDs. Print out a status message to the serial monitor, indicating that the box is unlocked.

```
    if(numberOfKnocks >= 3) {  
        locked = false;  
        myServo.write(0);  
        delay(20);  
        digitalWrite(greenLed, HIGH);  
        digitalWrite(redLed, LOW);  
        Serial.println("The box is unlocked!");  
    }  
}  
}
```

This function checks a number (knockVal) to see if it is valid or not.

```
boolean checkForKnock(int value) {
```

Check to see if value is greater than the quiet knock and less than the loud knock

```
    if(value > quietKnock && value < loudKnock) {
```

If the value falls between those two values then blink the yellow LED once and print the value of the knock to the serial monitor

```
        digitalWrite(yellowLed, HIGH);  
        delay(50);
```

---

---

## KNOCK LOCK

```
digitalWrite(yellowLed, LOW);  
Serial.print("Valid knock of value ");  
Serial.println(value);  
return true;
```

If value is either too quiet or too loud, print it out to the serial monitor and return false.

```
    } else {  
        Serial.print("Bad knock value ");  
        Serial.println(value);  
        return false;  
    }  
}
```

```
}
```

---

---

# KNOCK LOCK

## CONCLUSION

### How To Use the Knock Lock

1. When the Arduino is plugged in, a green LED light turns on and the servo moves to the unlocked position.
  2. The serial monitor prints "The box is unlocked!"
  3. You can click the switch to lock the box.
  4. As you knock the piezo will register each knock, although not all knocks are recognized as valid.
  5. The yellow LED will flash when a knock is registered as valid. and the serial monitor will indicate how many knocks are left to unlock the box.
  6. When the right number of locks have been reached, the red light will turn off, the green light will turn on, the servo will move 90 degrees and the serial monitor will indicate that the lock is disengaged.

There are various applications besides above table.

Fire Alarm, Burglar Alarm, Laundry Machine, Bath, Interphone, Chime, Pager, Back Buzzer, ME Instruments, Measuring Instruments, Vending Machine, Calculator, Automobile, Communication Radio, Hemodynamometer, Thermometer, Running meter, Facsimile, Audio timer, Automatic Controlling Devices.

# Piezoelectric Sound Components

## Piezoelectric Diaphragms

### ■ Features

1. Low power consumption.
2. No contacts therefore, no noise and highly reliable.

### ■ Applications

- Telephone ringers.
- Various office equipment such as PPCs, printers and keyboards.
- Various home appliances such as microwave ovens.
- Confirmation sound of various audio equipment.

### External Drive Type

**Node Diameter**

Part Number	Node Diameter (mm)
7BB-20-6C	φ13.5
7BB-27-4C	φ17.5
7BB-35-3C	φ22.5
7BB-41-2C	φ26.5

• Sound diaphragm without feedback electrode also have the same node diameters.

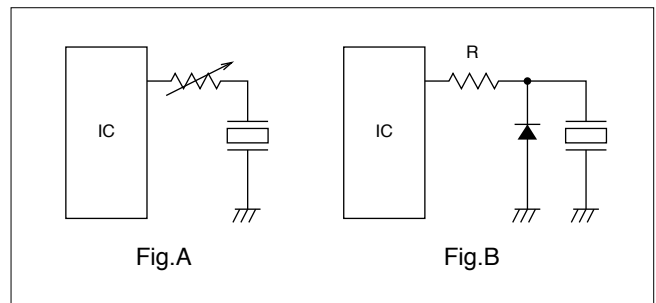

## Piezoelectric Diaphragms Notice

### ■ Notice (Soldering and Mounting)

1. Applying load on the center area of the diaphragm may cause clack in the ceramic element. When the diaphragm is supported by edge, the load should be only applied around edge.
2. Please consult with Murata or Murata representative, in case of soldering on the component.

### ■ Notice (Handling)

1. Please do not touch the component with bare hand because electrode may be corroded.
2. The component may be damaged if mechanical stress over this specification is applied.
3. Please pay attention to protect operating circuit from surge voltage provided by something of force such as falling, shock and temperature changing.
4. If DC voltage is applied to the component, silver migration may occur. Please pay full attention not to subject the component to DC voltage for long periods.
5. The resistor should be used as shown in Fig. A. A suitable resistance value should be chosen, preferably 1kΩ to 2kΩ. Instead of this measure, a diode may also be applied as shown in Fig. B.

6. Please pay enough attention not to pull lead wire too much because wire may be broken or soldering point may come off.

# Piezoelectric Sound Components

## Piezoelectric Sounders External Drive Pin Type

Now, microcomputers are widely used for microwave ovens, air conditioners, cars, toys, timers, and other alarm equipment. Externally driven piezoelectric sounders are used in digital watches, electronic calculators, telephones and other equipment. They are driven by a signal (ex, 2048Hz or 4096Hz) from an LSI and provide melodious sound.

### ■ Features

1. Low power consumption.
2. No contacts therefore, no noise and highly reliable.

### ■ Applications

- Telephone ringers.
- Various office equipment such as PPCs, printers and keyboards.
- Various home appliances such as microwave ovens.
- Confirmation sound of various audio equipment.

## Piezoelectric Sounders (External Drive) Circuit/Notice

### ■ Circuit

The following are examples of externally driven circuits.

- (1) Unstable multi-vibrator using Tr.
- (2) Circuits using inverters or NAND gates.

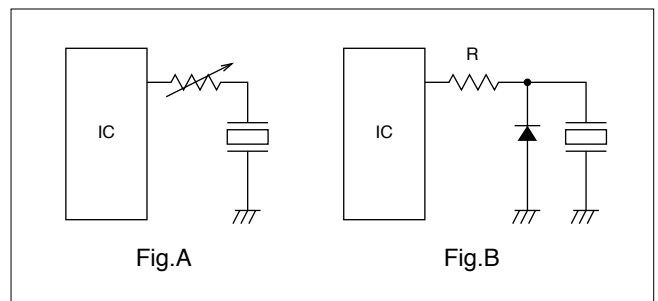

### ■ Notice (Soldering and Mounting)

Washing of the component is not acceptable, because it is not sealed.

### ■ Notice (Handling)

1. The component may be damaged if mechanical stress over this specification is applied.
2. Please pay attention to protect operating circuit from surge voltage provided by something of force such as falling, shock and temperature changing.
3. If DC voltage is applied to the component, silver migration may occur. Please pay full attention not to subject the component to DC voltage for long periods.
4. The resistor should be used as shown in Fig. A. A suitable resistance value should be chosen, preferably 1kΩ to 2kΩ. Instead of this measure, a diode may also be applied as shown in Fig. B.

5. Please pay enough attention not to pull lead wire too much because wire may be broken or soldering point may come off.

# Piezoelectric Sound Components

## Piezoelectric Ringers (PIEZORINGER®)

As the result of rapid development of ICs in telephones, demand for piezoelectric sounder as telephone ringers has also rapidly increased. To effectively satisfy this rising demand, Murata provides a suitable piezoelectric sounder called "PIEZORINGER", with the following features.

### ■ Features

1. Extremely clear sound.
2. Since it is voltage driven, the power consumption is quite negligible.
3. It can be driven directly from ICs.
4. Extremely thin and light.

## Piezoelectric Sounders Self Drive Pin Type

Piezoelectric sounder self drive type requires only simple circuit and DC power supply. Since this type uses resonant system, it is also available for alarms which need large sound volume.

### Applications

- Gas alarms, burglar alarms, smoke detectors.
- Air conditioners, Microwave ovens, washing machines and other home-electronic appliance controlled by microcomputer.
- Bicycles, toys, game machines.

## Piezoelectric Sounders (Self Drive) Notice

### ■ Notice (Soldering and Mounting)

1. Washing of the component is not acceptable, because it is not sealed.
2. Please do not cover the hole with tape or other obstacle as this will produce irregular oscillation.
3. There should not be any obstacle within 15mm from top of the component as this will produce irregular oscillation.

### ■ Notice (Handling)

1. The component may be damaged if mechanical stress over this specification is applied.
2. Please pay attention to protect operating circuit from surge voltage provided by something of force such as falling, shock and temperature changing.
3. If DC voltage is applied to the component, silver migration may occur. Please pay full attention not

to subject the component to DC voltage for long periods.

4. The standard self-driven circuits utilizes transistor switching. The circuit constants shown in the table below are optimally chosen to maintain stable oscillation. So please follow it when you design a circuit.

# Piezoelectric Sound Components

## Piezoelectric Buzzers

This is unified piezoelectric sounder which has piezoelectric diaphragm of 3 terminals connected to self drive circuit, and it easily generates sound with only a DC power supply (DC3.0-20V). Using suitably designed resonant system, this type can be used where large sound volumes are needed.

### Applications

- Gas alarms, burglar alarms.
- Air conditioners, microwave ovens and various types of microcomputer controlled home-electronic appliances.
- Automobile speed alarms, navigators, car stereos and other automobile equipment.
- Toys, games, and other simple electronic devices such as teaching aids.

## Piezoelectric Receiver Circuit/Notice

### ■ Circuit

### ■ Notice (Soldering and Mounting)

Washing of the component is not acceptable, because it is not sealed.

### ■ Notice (Handling)

1. The component may be damaged if mechanical stress over this specification is applied.
2. Please pay attention to protect operating circuit from surge voltage provided by something of force such as falling, shock and temperature changing.
3. If DC voltage is applied to the component, silver migration may occur. Please pay full attention not to subject the component to DC voltage for long periods.
4. Please pay attention to the hand set design. Sound pressure level - frequency characteristics are affected by the hand set design. (Blocking the sound emitting hole or air dumping hole may degrade S.P.L. -frequency characteristics. To dispose other components or obstacle close to the holes may also affect the characteristics.)

# Piezoelectric Sound Components

## Piezoelectric Speakers (CERAMITONE®)

As voice synthesizing techniques with ICs and LSIs are rapidly progressed, human voice synthesizing devices are put into practical use for portable calculators, clocks, vending machines, translating machines and so forth. In order to meet the demand, Murata has developed. Piezoelectric Speaker best suited for making synthesized voice or melody.

### ■ Features

1. High efficiency compared with conventional electromagnetic type speakers.
2. Ultra-thin and light-weight.
3. High impedance with less power consumption.
4. No electric noise, because they have no mechanical contacts.
5. Direct drive by IC is available.

VSB35EW-0701B

VSB50EW-0301B

Part Number	Oscillating Frequency Range	Resonant Frequency (Hz)	Impedance (ohm)	Capacitance (nF)	Maximum Input (mW)	Operating Temperature Range	Storage Temperature Range
VSB35EW-0701B	600Hz to 20kHz	950 ±150Hz[Lowest]	600[1kHz]	340 ±35%[120Hz]	75	-20 to +70°C	-30 to +80°C
VSB50EW-0301B	250Hz to 20kHz	400 ±150Hz[Lowest]	300[1kHz]	600 ±35%[120Hz]	150	-20 to +70°C	-30 to +80°C

### ■ Freq. Response (Sine Wave 1Vrms, 10cm)

Continued on the following page.

Continued from the preceding page.

### Impedance-Frequency Characteristics

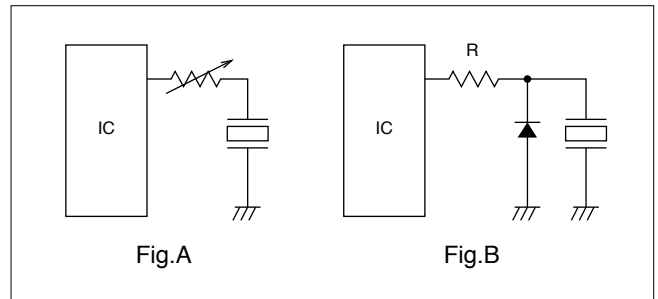

## Piezoelectric Speakers (CERAMITONE®) Notice

### ■ Notice (Soldering and Mounting)

1. Applying load on the center area of the speaker may cause clack in the ceramic element. When the speaker is supported by edge, the load should be only applied around edge.
2. Washing of the component is not acceptable, because it is not sealed.

### ■ Notice (Handling)

1. Please do not touch the component with bare hand because electrode may be corroded.
2. The component may be damaged if mechanical stress over this specification is applied.
3. Please pay attention to protect operating circuit from surge voltage provided by something of force such as falling, shock and temperature changing.
4. If DC voltage is applied to the component, silver migration may occur. Please pay full attention not to subject the component to DC voltage for long periods.
5. The resistor should be used as shown in Fig. A. A suitable resistance value should be chosen, preferably  $1k\Omega$  to  $2k\Omega$ . Instead of this measure, a diode may also be applied as shown in Fig. B.

6. Please pay enough attention not to pull lead wire too much because wire may be broken or soldering point may come off.

**Package**

**Minimum Quantity (pcs.)**

Products Name	Part Number	Minimum Quantity (pcs.)				
		ø330mmReel	Bulk (Box)	Ammo Pack	Magazine	
● Piezoelectric Diaphragms External Drive Type	7BB-12-9		5120			
	7BB-15-6		8000			
	7BB-20-3		3000			
	7BB-20-4		2400			
	7BB-20-6		1800			
	7BB-20-6A0		600			
	7BB-27-4		1500			
	7BB-27-4A0		600			
	7BB-35-3		800			
	7BB-35-3A0		400			
	7BB-41-2		400			
	7BB-41-2A0		250

**⚠ Note:**

1. Export Control

⟨For customers outside Japan⟩

Murata products should not be used or sold for use in the development, production, stockpiling or utilization of any conventional weapons or mass-destructive weapons (nuclear weapons, chemical or biological weapons, or missiles), or any other weapons.

⟨For customers in Japan⟩

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using our products listed in this catalog for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property, or when intending to use one of our products for other applications than specified in this catalog.

- ① Aircraft equipment
- ② Aerospace equipment
- ③ Undersea equipment
- ④ Power plant equipment
- ⑤ Medical equipment
- ⑥ Transportation equipment (vehicles, trains, ships, etc.)
- ⑦ Traffic signal equipment
- ⑧ Disaster prevention / crime prevention equipment
- ⑨ Data-processing equipment
- ⑩ Application of similar complexity and/or reliability requirements to the applications listed in the above

3. Product specifications in this catalog are as of January 2002. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before your ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read CAUTION and Notice in this catalog for safety. This catalog has only typical specifications. Therefore you are requested to approve our product specification or to transact the approval sheet for product specification, before your ordering.

5. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or third party's intellectual property rights and other related rights in consideration of your using our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

6. None of ozone depleting substances (ODS) under the Montreal Protocol is used in manufacturing process of us.
