Probabistic Models and Machine Learning

No. 1

Introduction

Hui Jiang

Department of Electrical Engineering and Computer Science

Lassonde School of Engineering

York University, Toronto, Canada

Course Info (tentative)

- **Instructors:**

  Hui Jiang (hj@cse.yorku.ca)

- **Course web site:**

  https://www.eecs.yorku.ca/course/6327/

- **Course Format:**
  - **Lectures (40 hours):**
    - **Covers basic probabilistic model, pattern classification theory, machine learning algorithms;**
    - **Self-study on some advanced topics in machine learning.**
- **Evaluation:**
  - **Class Participation (10%)**
  - **Two assignments (25%)**
  - **Two lab projects (40%)**
  - **In-class presentation (25%)**

Course Outline

- Part I: Introduction (6 hours)
  - Machine Learning: basic concepts
  - Math foundation: review
- Part II: Basic theory of pattern classification and machine learning (24 hours)
  - Bayesian decision rule; Model Estimation
  - Generative models: Gaussian, GMM, Markov Chain, HMM, Graphical models
  - Discriminative models: SVM, Neural networks (NN) and beyond
- Part III: Advanced Topics (6 hours)
  - Self-select and self-study
  - Presentation

Reference Materials

- **Lecture notes**
- **Assigned reading materials through the course**
- **Reference books:**

  [1] Pattern Recognition and Machine Learning by C. M. Bishop. (Springer, ISBN 0-387-31073-8)

  [2] *Pattern Classification* (2nd Edition) by R. O. Duda, P. Hart and D. Stork. (John Wiley & Sons, Inc., ISBN 0-471-05669-3)

  [3] Machine Learning: A Probabilistic Perspectives by *K. P. Murphy. (The MIT Press, ISBN 978-0-262-01802-9)*

- **Prerequisite:**
  - First course in probability or statistics
  - First course in linear algebra or matrix theory
  - C/C++/Java; matlab; perl/python/shell (plus)

Relevant AI Research Topics

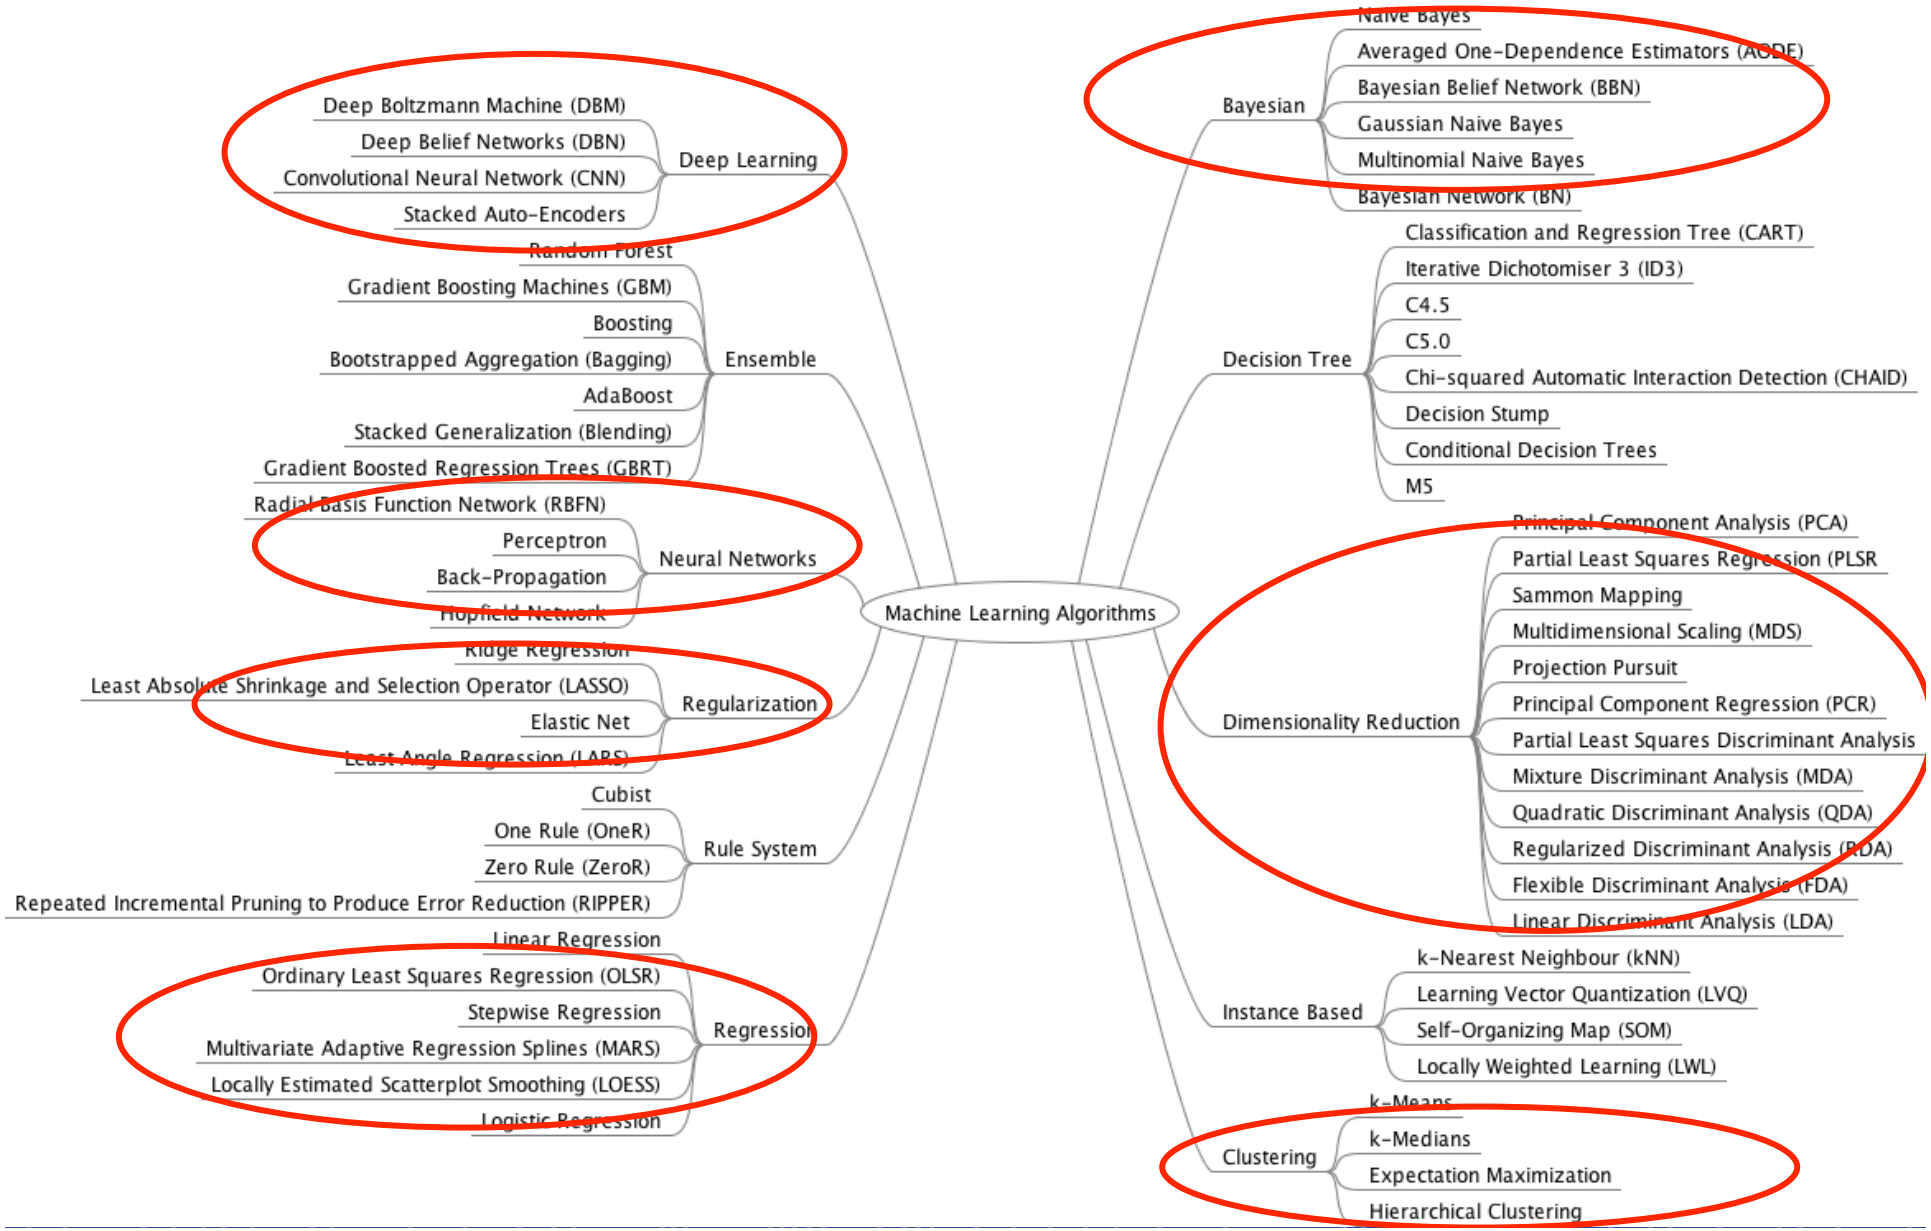
- Theory
  - ✓ Machine Learning
  - ✓ Pattern Recognition
  - ✓ Statistical Signal Processing
- Applications
  - ✓ Speech Processing
  - ✓ Spoken Language Processing
  - ✓ Natural Language Processing
  - ✓ Computer Vision
  - ✓ Data Mining
  - ✓ …

Pattern Classification: Paradigm Shift

- Knowledge based
  - Reply on expert(s); Small data samples
  - Simple toy problems
- Data-Driven
  - Large data samples
  - Statistical models; machine learning algorithms
- Big Data Era
  - Massive real-world data samples
  - Data intensive computing
  - Parallel/distributed platform: e.g. GPU, map-reduce

Machine Learning Algorithms

Machine Learning Algorithms



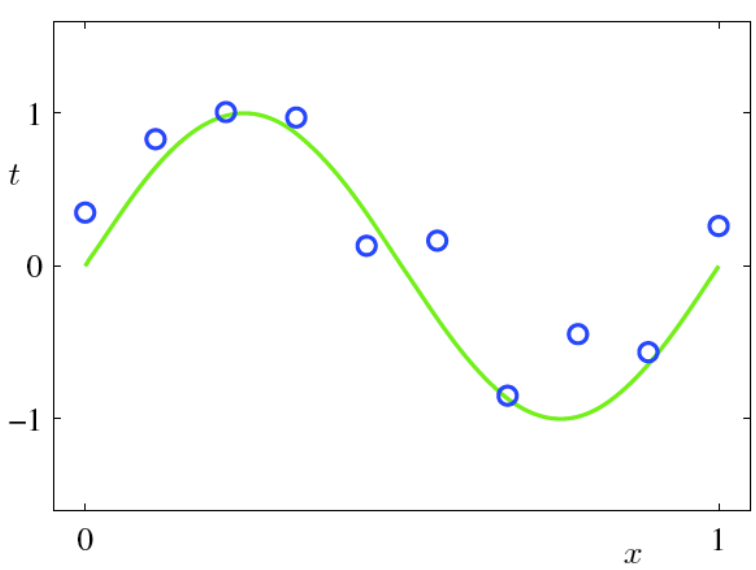
Advanced ML Topics

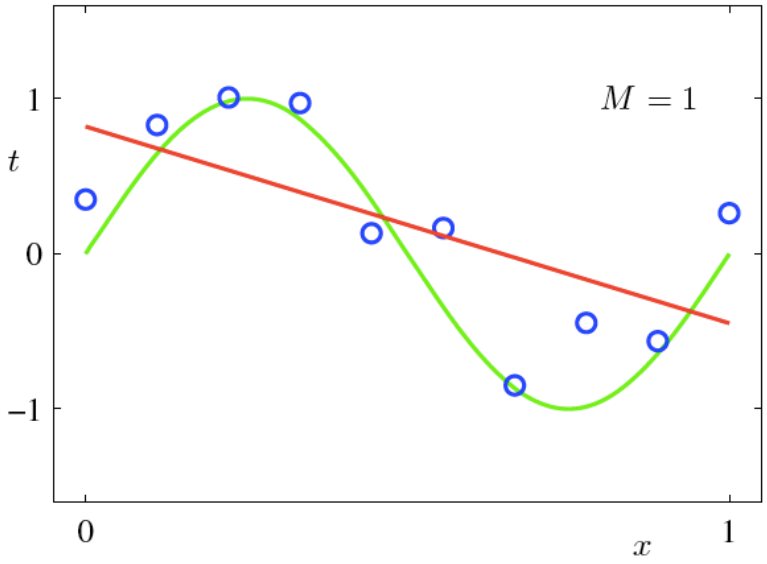
- Learnability
- On-line Learning
- Active Learning
- Reinforcement Learning
- Ensemble Learning
- Gaussian Processes

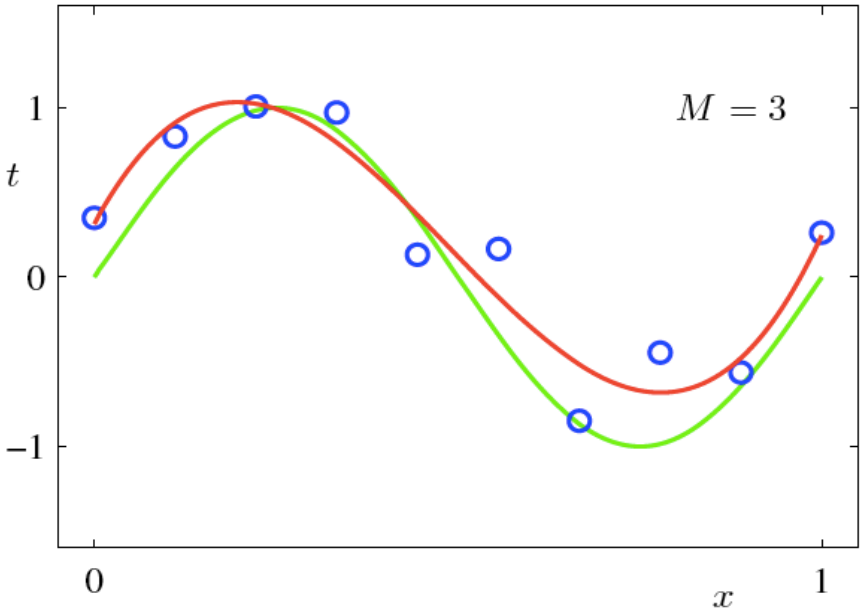
Some Machine Learning Concepts

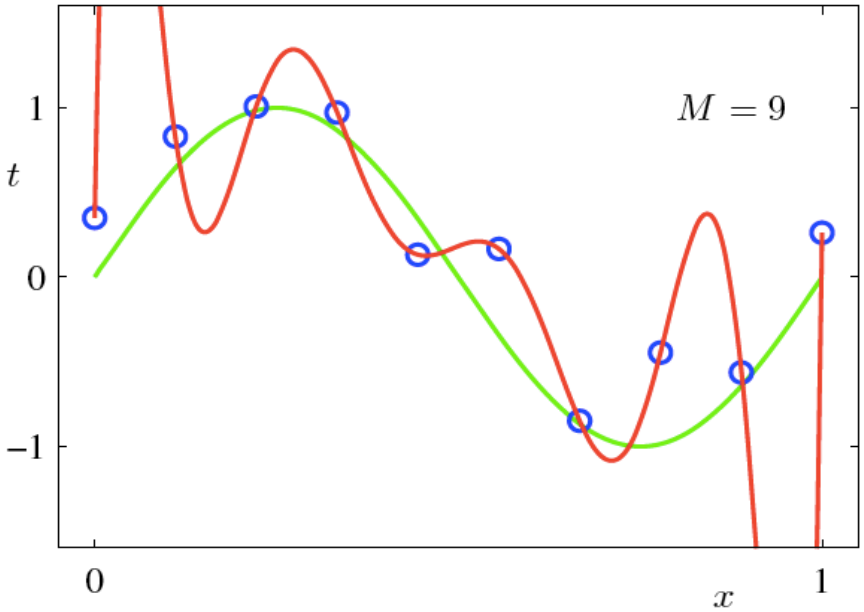
- Classification vs. Regression
- Supervised vs. Unsupervised (Clustering)
- Parametric vs. Non-parametric
- Linear vs. Nonlinear
- Underfitting vs. Overfitting (Regularization)
- Frequentist vs. Bayesian
- Probabilistic model vs. Rule-based

An Example: Curve fitting



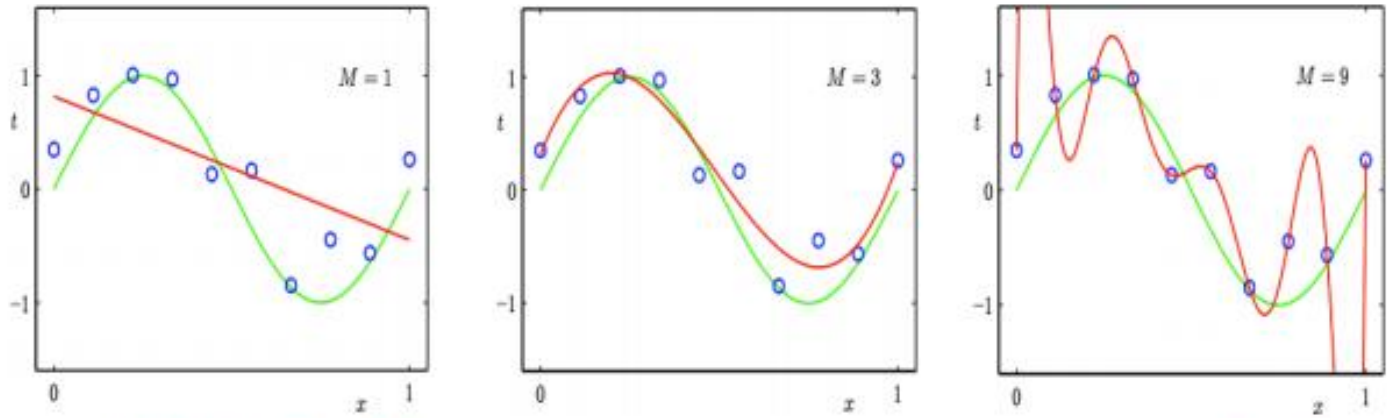






Under-fitting vs. Overfillting (Regularization)

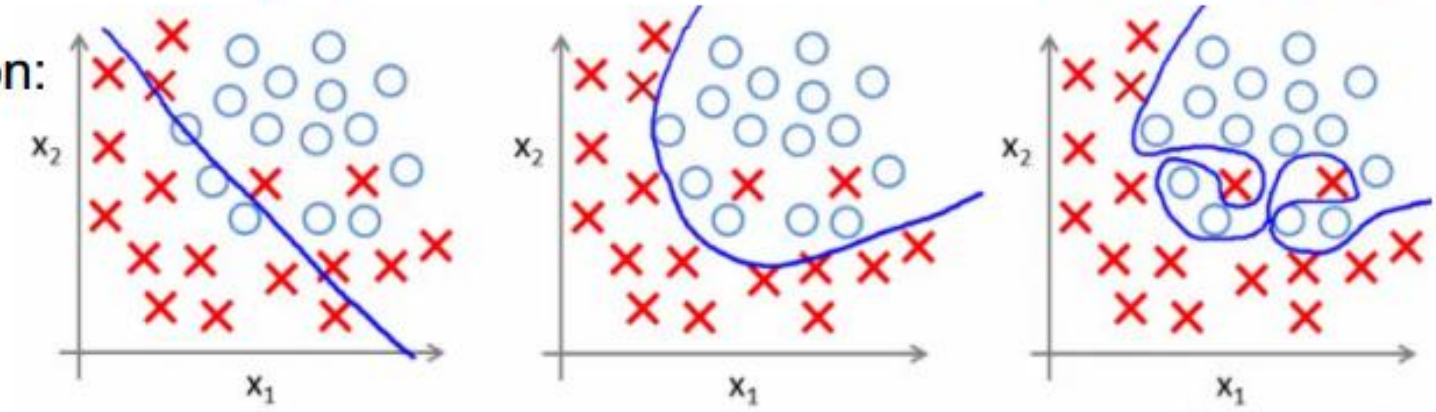
Regression:



predictor too inflexible:
cannot capture pattern

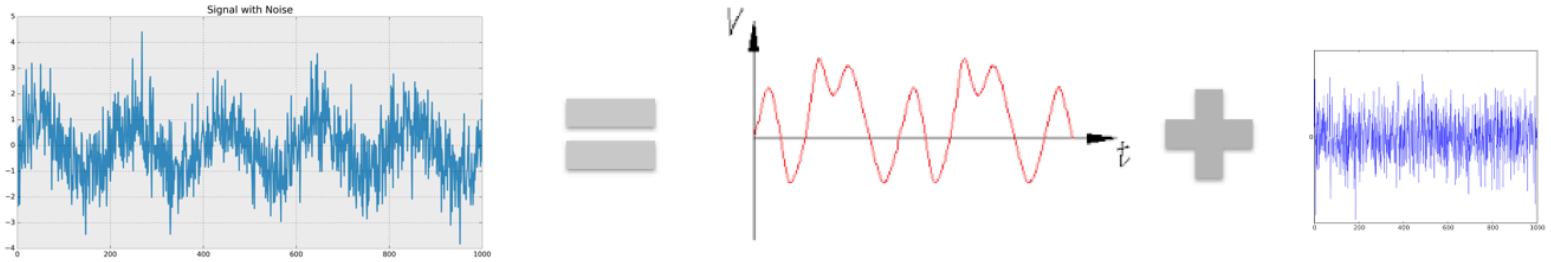
predictor too flexible:
fits noise in the data

Classification:



Under-fitting vs. Overfillting (Regularization)

data = signal + noise



- Weak models ➔ under-fitting
- Too strong models ➔ over-fitting (why?)

Machine Learning Procedure

- **Feature extraction:**
  - **Need to know objects to extract good features**
  - **Varies a lot among different applications (speech, audio, text, image, video, gestures, biological sequences, etc)**
  - **May need reduce dimensionality**
- **Statistical model training/learning**
- **Inference, matching, decision**

The basic theories common to various applications
