

Assignment 2 - Delay

Rubric Criteria

Time Interval (20%)	The GUI allows the user to set this in terms of seconds. It is possible to set an interval of any positive length up to 3 sec. The repetition sounds at the right interval without any artifacts.
Dry / Wet (20%)	The GUI allows to set these at any value between 0 and 100%. The loudness of the incoming signal (set by Dry) and the first repetition (set by Wet) is affected accordingly.
Feedback (20%)	The GUI allows to set the feedback at any value between 0 and 100%. The loudness of the repetitions (after the first one) is affected accordingly.
Ping pong (20%)	The GUI allows the user to select or deselect this option. Deselected by default. If selected, repetitions alternate between the left and right channel.
Combination (10%)	The plugin allows the user to combine all of the above settings, e.g. ping pong delay with Dry set to 20%, Wet to 50%, time interval at 0.2 sec, and Feedback at 70%. The repetitions are created appropriately.
Presentation (10%)	Is the layout of the GUI intuitive? Is it easy for the user to find the feature they are looking for? Does the plugin look professional in terms of matching fonts, centered elements, no typos etc. ?
